AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A black composition comprising as indispensable components a titanium nitride oxide, an acrylic resin, carbon black and a solvent, wherein a weight ratio of the titanium nitride oxide to the acrylic resin is within the range of between 75/25 to 60/40; wherein X-ray intensity ratios R₁ and R₂ represented by the Equations (1) and (2) below, respectively, satisfy the relationships represented by Formulae (3) and (4) below:

$$R_1 = I_3/\{I_3+1.8(I_1+1.8I_2)\}$$
 (1)

$$R_2 = I_2/I_1$$
 (2)

$$0.70 < R_1 \le 0.82 \tag{3}$$

$$0.85 < R_2 < 1.80$$
 (4)

wherein I_1 represents the maximum diffraction intensity of the titanium nitride oxide when the angle of diffraction 2θ , determined by using CuK α line as the X-ray source, is 25° to 26°,

 I_2 represents the maximum diffraction intensity of the titanium nitride oxide when the angle of diffraction 20 is 27° to 28°,

 $I_3 \, represents the \, maximum \, diffraction \, intensity \, of \, the \, titanium \, nitride \, oxide \, when \, the \, \\$ angle of diffraction 2θ is 36° to 38° , and

wherein a black coating film obtained from said black composition has an optical density (OD value) of not less than 4.4 per 1 μm of film thickness,

wherein the transmittance of i-ray ultraviolet light through a resin black matrix obtained from said black composition is more than 0.2% when the OD value is 2.0, and wherein the minimum exposure energy required for photo-curing is not more than 60 mJ/cm².

Application No.: 10/575,776 Docket No.: 0760-0353PUS1
Page 3 of 12

2. (Original) The black composition according to claim 1, wherein said X-ray intensity ratio R₁

is not less than 0.80.

3. (Previously Presented) The black composition according to claim 1, wherein said solvent has

a boiling point of 120°C to 180°C, and a viscosity of 3 mPa·s to 10 mPa·s.

4. (Cancelled).

5. (Previously Presented) The black composition according to claim 1, further comprising an

organosilane hydrolysis condensate.

6. (Previously Presented) The black composition according to claim 1, further comprising a

compound having a siloxane bond and a carbon-carbon double bond in a single molecule and

having no silanol group.

7. (Previously Presented) The black composition according to claim 6, wherein said compound

having a siloxane bond and a carbon-carbon double bond in a single molecule and having no

silanol group has the structure represented by the following Formula (7):

$$\begin{array}{c} R^{1} \\ CH_{2} = C \\ R^{2} + S_{i} = O \\ CH_{2} = C \\ R^{4} + S_{i} = O \\ R^{5} + C = CH_{2} \\ R^{6} + C = CH_{2} \\ R^{6} + C = CH_{2} \\ R^{1} \end{array}$$

$$(7)$$

wherein each R^1 independently represents hydrogen or alkyl group; each R^2 independently represents an organic group containing amide bond, imide bond, ester bond or urethane bond; R^3 to R^6 independently represent alkyl group; and n represents an integer of 1 to 3.

- 8. (Cancelled).
- 9. (Cancelled).
- 10. (Cancelled).
- 11. (Previously Presented) A black composition comprising as indispensable components a titanium nitride oxide and a resin; wherein X-ray intensity ratios R_1 and R_2 represented by the Equations (1) and (2) below, respectively, satisfy the relationships represented by Formulae (3) and (4) below:

$$R_1 = I_3/\{I_3 + 1.8(I_1 + 1.8I_2)\}$$
 (1)

$$R_2=I_2/I_1$$
 (2)

$$R_1 > 0.70$$
 (3)

Application No.: 10/575,776 Docket No.: 0760-0353PUS1
Page 5 of 12

$$0.85 < R_2 < 1.80$$
 (4)

wherein I_1 represents the maximum diffraction intensity of the titanium nitride oxide when the angle of diffraction 2 θ , determined by using CuK α line as the X-ray source, is 25° to 26°, I_2 represents the maximum diffraction intensity of the titanium nitride oxide when the angle of diffraction 2 θ is 27° to 28°, I_3 represents the maximum diffraction intensity of the titanium nitride oxide when the angle of diffraction 2 θ is 36° to 38°; and wherein the transmittance of irray when the ontical density (OD value) is 2.0 is more than 0.2%.

- 12. (Original) The black coating composition according to claim 11, wherein said X-ray intensity ratio R₁ is not less than 0.80.
- 13. (Previously Presented) The black coating composition according to claim 11, wherein said resin is at least one selected from the group consisting of an acrylic resin and a polyimide resin.
- 14. (Previously Presented) The black coating composition according to claim 11, wherein the weight ratio of said titanium nitride oxide to said resin is within the range between 75/25 and 60/40.
- 15. (Previously Presented) The black coating composition according to claim 11, which has an optical density (OD value) of not less than 4.4 per 1 μ m of film thickness.
- 16. (Cancelled).

17. (Previously Presented) The black coating composition according to claim 11, further comprising a compound having a siloxane bond and a carbon-carbon double bond in a single molecule and having no silanol group.

18. (Previously Presented) The black coating composition according to claim 17, wherein said compound having a siloxane bond and a carbon-carbon double bond in a single molecule and having no silanol group has the structure represented by the following Formula (7):

$$\begin{array}{c} R^{1} \\ CH_{2} = C \\ R^{2} + Si - O \\ CH_{2} = C \\ R^{4} \\ R^{6} \\ R^{1} \\ C = CH_{2} \\ R^{6} \\ R^{1} \\ C = CH_{2} \\ R^{1} \\ R^{1} \\ \end{array}$$
 (7)

wherein each R^1 independently represents hydrogen or alkyl group; each R^2 independently represents an organic group containing amide bond, imide bond, ester bond or urethane bond; R^3 to R^6 independently represent alkyl group; and n represents an integer of 1 to 3.

- 19. (Previously Presented) The black coating composition according to claim 11, further comprising carbon black.
- 20. (Previously Presented) A resin black matrix obtained from said black coating composition according to claim 11.

Application No.: 10/575,776 Docket No.: 0760-0353PUS1
Page 7 of 12

21. (Original) A color filter for liquid crystal displays, which color filter comprises said resin black matrix according to claim 20.

22. (Original) A liquid crystal display comprising said color filter for liquid crystal displays, according to claim 21.

23. (Previously Presented) A resin black matrix obtained by exposing and developing a black coating film obtained by coating said black composition according to claim 1 on a substrate.

24. (Previously Presented) A color filter for liquid crystal displays, which color filter comprises said resin black matrix according to claim 23.

25. (Previously Presented) A liquid crystal display comprising said color filter for liquid crystal displays, according to claim 24.

26. (Previously Presented) The black composition according to claim 1, further comprising a photopolymerizable monomer and a photoinitiator.
